

Two forms of control. One application. Better looking turf.

Caravan™ G is the first-ever broad-spectrum fungicide/insecticide granular combination. By pairing the proven control of Heritage® fungicide and Meridian® insecticide, Caravan G allows you to control a broad range of insect and disease pests including white grubs and brown patch with one application, saving you time and money. Use Caravan G on residential and commercial lawns, golf courses and athletic fields and let its systemic disease and insect control help you create better looking turf.

Not just grub control. Not just disease control. Better looking turf.

2012 Brown Patch Evaluation on Perennial Ryegrass / Syngenta Vero Beach Research Center

Treat for broadest possible range of pests in a single visit...

One application means half the fuel, labor and additional overhead costs required to achieve the same revenue and control. Caravan G delivers the best of Heritage fungicide and Meridian insecticide.

- Caravan G controls more than 20 turfgrass diseases including brown patch, red thread, *pythium* blight, and leaf spot. Early season application can prevent brown patch for up to one month.
- Caravan G also controls numerous insects such as white grubs, chinch bugs, sod webworms and ants. It has a wide application window and relaxed watering requirements, effective even if there is no rain or irrigation for up to one week after application.
- While timing and geographies will vary, one application of Caravan G made between May 15 and July 15 can yield season-long grub control and up to one month preventive brown patch control. For additional disease control, follow-up

applications can be made with Heritage G or Headway® G fungicides as needed.

- By using a highly water-soluble, quick-release carrier, Caravan G is able to provide the effectiveness of a sprayable with the convenience of a granular. A light irrigation or even a heavy dew will disperse the active ingredients systemically into the plant.

Compare Caravan G to Merit® insecticide on fertilizer

Pest	Caravan G	Merit 0.2% on Fertilizer
Grubs	+	+
Chinch bugs	+	Suppression only
Sod Webworms	+	Not listed on label
Ants*	+	Not listed on label
Bill bugs	+	+
Crane flies	+	+
Mole crickets	Suppression only	+
Japanese beetles	+	+

* Excluding Carpenter, Fire, Harvester and Pharaoh ants

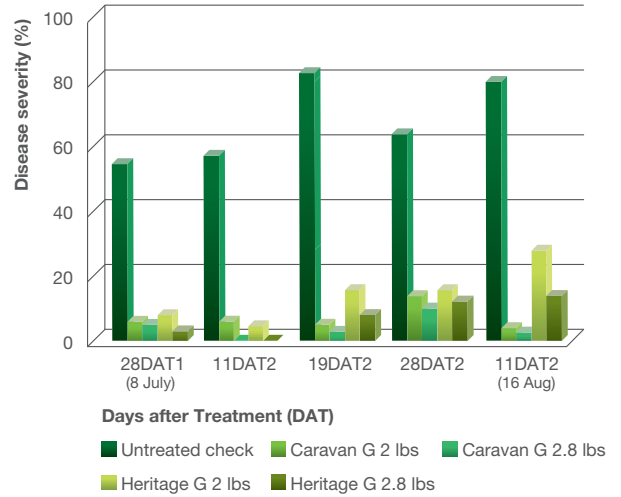

Granular convenience. Re-sealable bag.

Caravan G is packaged in a 30-pound bag with an easy-to-close zipper seal so you use only what you need for a cost-effective full-yard or spot treatment.

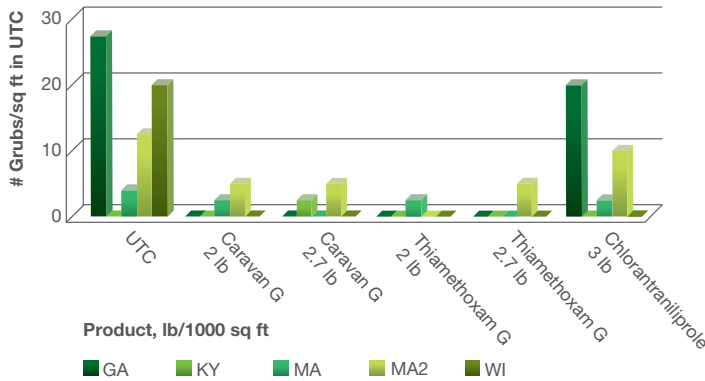

- Granular form eliminates the time and costs associated with water supply access, cumbersome mixing and additional personal protection equipment required with liquid applications.
- The carrier size provides the convenience of a granular with the efficacy of a sprayable.
- Re-sealable bag allows for multiple applications without waste or accidental spills.
